AMA Co Ltd is the leading company in the field of development and manufacture of innovative test-systems for Helicobacter pylori detection. Cooperation with the best medical scientists, researchers and clinical physicians allowed AMA to elaborate the up-to-date test-systems with highest diagnostic characteristics, including smart design, ultra rapid reaction, extended storage period and economy. The tests can be implemented right in the doctor's office in the course of the patient's primary examination. With over 25 years of experience on the market, the AMA RUT and HELIC ABT test-systems are increasingly demanded in 52 countries all over the world. AMA RUT test for gastroscopy procedure and non-invasive HELIC Ammonia Breath Test for diagnostic selection of patients allow to detect Helicobacter pylori easily and quickly without the use of central laboratory.

Established in 1988, HEM Ltd. currently is one of the oldest and most renowned private companies in the Russian lab supplies market.

A dedicated innovator and a perpetual promoter of the modern approach in the lab routines, the company nowadays has firmly set itself up as an unquestionable leader in its business segment.

In recent years the company prioritized three business directions – microbiology, parasitology and point-of-care. In this field, the company can satisfy up to 90% of the needs of any laboratory.

Being both a renowned manufacturer and a large distributor of laboratory consumables and diagnosticums, the company successfully faces challenges of the competitive environment. HEM's production and distribution facilities are a combination of modern high-tech equipment, innovative technologies, optimal logistics, knowledge and skills of the team. The company's production is certified according to ISO 13485. HEM's historical milestones:

1988 – launch of production of the first Russian blood-typing reagents (COLYCLONs).

1991 – production of the first Russian single-use blood lancets

2001 – launch of production of lab consumables

2013 – start of production of the first Russian ready-to-use culture media in Petri dishes (made by our subsidiary CFCM: Central Factory of Culture Media)

HEM's mission is to make valuable contribution into public healthcare by supplying laboratories with modern and affordable consumables, making daily routine of medical staff safe and comfortable, with diagnostic research being standard and its results being accurate.

HEM company manufactures and sells consumables for medical laboratories

## MODUS CJSC

Russia, 620100  
Yekaterinburg,  
Tveritina Str. 19+7 499 391 25 16  
+7 343 317 47 20  
+7 912 208 32 10

zaomodus@ya.ru

tianoks.ru

The device is designed to produce and deliver a gas mixture containing nitric oxide (NO) to the patient's respiratory circuit and monitor the concentration of NO in the respiratory mixture supplied to the patient.

The use of nitric oxide therapy is clinically justified in critical conditions of patients in perinatal centers and obstetric hospitals, cardiac surgery centers, Covid departments, in the treatment of acute respiratory distress syndrome, severe pneumonia, decompensation of patients with precapillary pulmonary hypertension, acute right ventricular failure, in the postoperative period of cardiac surgery.

The nitrogen monoxide delivery unit is an AC-powered product that can include built-in rechargeable batteries designed to deliver precise amounts of nitrogen oxide (NO), also known as nitrogen monoxide, into the respiratory tract of newborns, children and adult patients for the treatment of serious respiratory diseases (for example, primary pulmonary hypertension, acute respiratory distress-syndrome).

The TIANOX nitric oxide therapy device consists of a portable main unit that provides the ability to monitor and deliver NO to gases that the patient will inhale using a ventilator or other respiratory device/system.

The device performs:

- production of NO-containing gas mixture from ambient air,
- provides delivery of a gas mixture containing nitric oxide (NO) to the patient's respiratory circuit and monitoring of the concentration of NO in the respiratory mixture supplied to the patient,
- adjustment of the NO concentration in the NO-containing gas mixture.

The device provides the possibility of setting alarm thresholds according to the following parameters:

- maximum/minimum concentration of NO (Name) in the respiratory circuit,
- the maximum concentration of NO<sub>2</sub> (NO<sub>2</sub> max) in the respiratory circuit. When the Nomex and NO<sub>2</sub>max thresholds are triggered, NO generation automatically stops and an audible alarm is activated.
